EYECONIQUE BEAUTY

TEMPORARY BROW SERVICES

Aftercare Guide

BROW LAMINATION - FIRST 24 HOURS

- Keep brows dry and avoid steam, saunas, swimming, heavy sweating, and prolonged hot showers.
- Avoid brow makeup, oils, exfoliants, and strong skincare directly on the brows.
- Avoid sleeping face-down or pressing the brows into the pillow if possible.
- Brush brows gently into place with a clean spoolie as needed.

BROW LAMINATION - ONGOING CARE

- After the first 24 hours, condition the brow hairs regularly with a gentle nourishing brow product.
- Brush hairs into your preferred shape rather than forcing them against their natural direction.
- Avoid over-processing with frequent chemical services; follow the rebooking interval recommended by your artist.

BROW TINT / HENNA

- Keep brows dry for the first several hours and avoid steam, oil cleansers, strong exfoliants, and scrubs around the brows for 24-48 hours.
- Tint naturally fades over time. Oil-based products, exfoliation, sun, swimming, and frequent cleansing can shorten longevity.
- Do not scrub or pick at tinted skin.

WAXING / BROW SCULPT

- Mild redness or sensitivity can occur after waxing and usually settles quickly.
- For 24-48 hours, avoid intense heat, saunas, heavy sweating, tanning, strong acids/retinoids, facial scrubs, and fragranced products on freshly waxed skin.
- Use gentle skincare and SPF once the skin feels calm.

COMBINATION SERVICES

If you had lamination + tint + wax, follow the most protective instruction that applies. For example, keep brows dry for the full lamination window and avoid active skincare around freshly waxed skin.

RESULT LONGEVITY

Temporary results fade gradually and vary with hair growth, skin type, skincare, cleansing habits, sun exposure, and lifestyle. Your artist can recommend an appropriate maintenance schedule.

WHEN TO CONTACT US / SEEK CARE

Reach out if you experience unexpected or persistent irritation. Seek medical care for severe swelling, blistering, spreading rash, difficulty breathing, or other symptoms of a significant allergic reaction.

Keep it soft

Gentle aftercare protects both the brow hairs and the skin underneath. Avoid over-brushing, over-cleansing, and strong actives while the area settles.
